Executive Summary

The following presents a summary of research findings for the *IVGID 2014 Beach Survey* conducted during the summer and fall of 2014 for Incline Village General Improvement District (IVGID), Department of Parks and Recreation. The survey design and sampling methodology was developed by Design Workshop with input from Chuck Nozicka Consulting in the role of research project technical advisor. Chuck Nozicka Consulting also conducted data analysis and provided this summery report.

Findings for each research topic are first are presented for the each of the three samples including the mailed, online, and on-site intercept samples. Results are then presented for each topic and by preferred beach (*which beach do you use most often?*).

Methodology

- The 2014 survey utilized three separate data collection modes: a self-administered questionnaire mailed to IVGID property owners, augmented by a companion self-administered online questionnaire, and an on-site intercept sample of beach users collected at the selected beaches during the summer of 2014.
- A total of 2,224 useable surveys were collected via the mailing process, 254 via the online method, and 286 via the on-site intercept method.
- All data was entered into a format provided by Survey Monkey (SM), an online survey research platform. Data was analyzed by SM, with additional examination by data exported into EXCEL spreadsheet and in SPSS for select data points.

Respondent Demographic Profile

- IVGID beach users are a relatively older demographic, with the mailed sample averaging 61.0 years, online 52.9 years, and intercept sample at 52.8 years.
- Those over 65 years comprised 42.1% of mailed respondents and 48.0% of online respondents, but about one quarter (24.8%) of intercept respondents; intercept respondents had the largest percentage of those less than 34 years of age.
- The majority of those surveyed live in households comprised of couples or multiple adults, both with and without children at home. A minority are single. About half of those surveyed in all samples live in households with no children.
- The respondents represent an affluent population, with the majority living in households at or above \$100,000 per year (80.6% mailed, 86.4% online, 71.6% intercept). Though still relatively affluent the younger intercept sample is less so that the other respondents.
- The respondents are similarly well educated with more than 8 in 10 having a college degree or more (85.6% mailed, 89.7% online, 81.3% intercept).
- Those with a Ski Beach preference tended to be male (mailed 56.3%, online 71.9%, intercept, 67.6%); among the online sample, Ski Beach also has a higher percentage of those single with children (12.5%) and multiple adult households with children (15.6%).

- Over one-third (39.4%) of the Ski Beach intercept sample was also from a single no children household, somewhat lower income, and a younger average age (45.7 years).
- Those with an Incline Beach preference included a large percentage of couples with children (37.7%), while Burnt Cedar Beach loyalists were also more likely to be couples with children (online 44.2%) or from households with multiple adults with children (intercept 12.3%) compared to others.

Beach Use Profile

- The vast majority of beach users are either full time residents (45.8% mailed, 60.8% online, 48.2% intercept), or 2nd home owners (combined 51.9% mailed, 36.8% online, 41.2% intercept); more than 90% of mailed and online respondents were parcel owners.
- The bulk of those surveyed visit IVGID beaches several times a month or more; those reporting the highest frequency of use were the intercept sample (44.5% more than one day per week).
- The most typically visited beach is Incline Beach (74.0% mailed, 81.6% online, 80.9% intercept), followed by Burnt Cedar and Ski Beach.
- A small minority do not visit IVGID beaches (6.9% mailed 2.4% online). The primary reasons for not visiting the beaches are: 1) too crowded (45%) and, 2) just not a beach goer (44%).
- Incline Beach is the beach visited most often, with half or more saying that they use this beach most often (46.9% mailed, 50.2% online, 56.8% intercept), followed by Burnt Cedar and Ski Beach.
- Average party size for the intercept sample was 2.77 persons. The length of stay at IVGID beaches averages well over 3 hours per visit (mailed 3.25 hours, online 3.94 hours, and intercept 3.82 hours).
- The majority in all samples listed the scenery and proximity as the reasons why they visit IVGID beaches (over 65% for all samples); a second tier included BBQ and picnic areas (39.4%, 38.4%, and 30.6%), and open lawn areas (39.1%, 42.0%, and 34.3%).
- The most important attributes that attract people to IVGID beaches are ranked as follows: 1) being near the water, 2) outdoors/scenery, 3) relaxation, 4) family bonding, 5) social interaction, 6) exercise, and lastly 7) partying.
- When asked about the beach they used most often the preferred beach approximately half of respondents from all samples listed Incline Beach as their preference (mailed 46.9%, online 50.2%, intercept 56.8%), followed by Burnt Cedar Beach (38.2%, 34.4%, and 30.4%), while Ski Beach was less preferred with slightly more the one-in-ten visiting that beach most often (mailed 14.9%, online 15.4%, intercept, 12.9%).
- However, those preferring Ski Beach visited more days per season (combined weekly or more than one day per week – mailed 52.9%, online 60.0%, intercept 63.9%), followed by Incline Beach, with a similar percentage among intercept respondents (64.8%).

- Among reasons to visit all three beaches, highest scores were for proximity/closeness including Incline Beach (mailed 18.2%, online 15.5%, and intercept 18.0%), Ski Beach (mailed 13.2%, online 17.5%, intercept 15.4%) and Burnt Cedar (mailed 9.5%, online 11.0%, intercept, 10.6%).
- Next mentioned reason to visit was scenery/natural environment at Incline Beach (mailed 17.0%, online 15.5%, intercept 16.9%), Ski Beach (mailed 13.2%, online 9.7%, intercept 12.1%), and Burnt Cedar Beach (mailed 14.1%, online 13.8%, intercept 13.3%).
- However, each beach featured characteristics distinct from the others that motivated recreation users to visit – compared to Incline Beach users of Ski Beach mentioned good boating, while for Burnt Cedar Beach the pool and open lawn areas were noteworthy.
- Distinctions among beaches were most notable when respondents listed the primary reason to visit. For all sample groups proximity and scenery remained the prime reason to visit Incline Beach, for Ski Beach boating stood out, and for Burnt Cedar Beach the pool was a predominant reason.

Recreation Use Patterns and Preferences

- Respondents listed a full range of typical beach activities led by resting/relaxing (mailed 87.7%, online 86.6%, and intercept 87.7%); over 50% of each sample also listed swimming in the lake, picnicking, and sunbathing. A second tier of typical activities was listed by one-quarter of respondents in nearly all categories including kayaking, sightseeing, playground use, stand up paddle boarding, and special events.
- Among typical recreation activities listed, two were among the top mentions for all three beaches and by all three sample groups – swimming in the lake and resting/relaxing. By varying degrees of order for each specific beach, two other passive recreation categories held for all beaches and for all sample groups – sunbathing and picnicking.
- Each beach also featured a full array of other activities in which visitor participated, with the principal distinctions being a preference for boating and kayaking at Ski Beach and swimming in the pool at Burnt Cedar Beach.
- Among the primary activities, the most mentioned by all samples was passive beach enjoyment including resting/relaxing (mailed 42.4%, online 40.1%, intercept 44.2%); the second most mentioned primary reason was swimming in the lake (14.9%, 13.4%, and 21.4% respectively), the remaining primary activities listed covered a full range with each garnering less than 10% of each sample.
- Each beach indicated its unique position among IVGID properties when respondents listed their primary recreation activities Incline Beach was distinguished by relaxing and swimming in the lake for all respondents; Ski Beach was clearly a preferred boating destination with power boating, kayaking and PWC use mentioned at varying degrees depending on the sample; Burnt Cedar was again noteworthy for pool use.

- When asked about new amenities or services that could enhance the IVGID beach experience, respondents in all samples with slight variation ranked as follows:
 improved restrooms, 2) improved café/bar/restaurant, 3) music events, 4) additional picnic or BBQ areas, 5) food and drink service to the beach, 6) umbrella rentals, 7) chair and cabana rentals, 8) a climbing wall, 9) valet parking, and 10) bungee trampoline.
- The importance of new amenities and services at each beach was similar to respondent preferences overall, with improved restrooms, improved snack bar/café/restaurant, and music events consistently the top three rated items.
- A second tier of new amenities and services desired included food and drink service to the beach, additional picnic and BBQ areas, improved bar service, umbrella rentals, and improved playground facilities also noted. Among the lower tier of new amenity rankings were chair and cabana rentals, valet parking, and bungee trampoline.
- Regarding beach access policy, the majority preferred a picture pass and punch card user policy (mailed 63.2%, online 58.4%, intercept 57.9%); from one-quarter to one-third also included cash entry guests (mailed 26.2%, online, 32.0%, intercept 33.1%), about 10% of each sample preferred a picture card only entry.
- Those preferring only picture card entry comprise about 10% for the mailed sample at all three beaches. Among online users, a smaller percentage called for picture card only at Ski Beach (6.5%) and Incline Beach (6.6%), with Burnt Cedar Beach having a somewhat higher percent of mentions from the online sample (15.4%).
- Among intercept users, responses varied to a greater degree by beach. These respondents were far more open to cash entry at Ski Beach (50%), with only 3.5% saying this beach should be picture card only. Like the other respondent samples, from one-quarter to one-third said cash entry was acceptable at Incline and Burnt Cedar Beaches.
- The most mentioned write-in comments concerned beach crowding, parking, allowing dogs, cleanliness, and adding music entertainment events.
- IVGID beaches receive extremely high satisfaction ratings by every respondent sample, with an average on a 1 to 10 scale ("1" Absolutely Not Recommend to "10" Absolutely Recommend), with mailed sample at 8.84, online 8.65, and intercept 8.96.

1. Introduction

This report comprehensively profiles recreation user perspectives of IVGID beaches. The research project was designed to provide supporting information for an overall beach facility assessment currently in-progress by Design Workshop (DW), Stateline, Nevada for the Incline Village General Improvement District (IVGID).

The questionnaire design and sampling methodology was conducted by DW with input from IVGID. Chuck Nozicka Consulting was retained as a technical advisor to DW and provided comments and input for the research project as well as conducting analysis of data provided by DW through the *Survey Monkey* (SM) platform. This summary report is provided by Chuck Nozicka Consulting, Tourism and Recreation Planning, Sacramento, California.

Chuck Nozicka Consulting has significant experience conducting tourism development and recreation use by applying primary and secondary research to a range of planning and development projects. These projects including planning and development work in the Lake Tahoe Basin as well as in other Sierra Nevada recreation destinations. For thirty years our firm has focused its work on community planning and development with a focus on the dynamic recreation and tourism sector. We have assisted communities and resource managers with analysis that provides long term sustainability in recreation experience quality, environmental integrity, and economic benefit for local communities and resource managers.

Objectives

The scope of work was designed to assist Design Workshop with the development and analysis of a community and recreation user survey for the recreation facilities operated by the Incline Village General improvement District (IVGID) Recreation Department. Specifically the tasks included the following:

- Project scoping and background review. This task included a review with DW and IVGID focusing on survey objectives and approach. We assisted with identifying and refining project parameters by reviewing related background information sources.
- Survey design. We assisted Design Workshop with design of the survey instrument and data collection approach. Specifically we reviewed IVGID project objective information and reviewed proposed data collection approaches, reviewed and revised the survey instruments as needed, and provided a coding approach for subsequent data entry and analysis tasks.
- Data review and analysis. Data was entered into the Survey Monkey (SM) platform per the selected DW and IVGID data collection approach by IVGID staff. We reviewed raw data in the SM platform and exported each individual sample set into EXCEL format for further assessment. We also conduced all available and pertinent SM "compare" analysis and also exported this data into an EXCEL format, conducted detailed analysis using EXCEL and where applicable a statistical analysis software package – the Statistical Package for the Social Sciences (SPSS, IBM). We conducted a wide variety of data runs to identify all salient output as is typically done with surveys of this type.
- Summary report. We assessed and presented study findings in this summary report including tabular and graphic presentations of all salient findings.

 Observations. Finally, we presented consultant observations and conclusions with respect to their implications for future recreation planning and management at IVGID beaches.

Report Content

Following is a summary of each research task according to the chapters in this report. Note that all pertinent findings are also broken out by "beach used most often" or preferred beach. All data points showing useful distinctions among selected beaches are presented. In addition to this Introduction chapter the report includes the following:

Chapter 2: Respondent Profile. This section presents a profile of study respondents including all surveyed demographic characteristics, beach use activities, and reasons for visiting IVGID beaches.

Chapter 3: Recreation Use Patterns and Preferences. We identified beach recreation patterns, preferences, and user motivations for each sample category.

Chapter 4: Planning Implications. As indicted by the data and the consultant's professional observations, we outline a series of implications for recreation management and future associated recreation programming.

Appendix: Copies of the survey questionnaire used in each sample are provided.

Methodology

As developed by DW and IVGID three separate data collection approaches were utilized for purposes of economic and methodological efficiency, and to allow for the maximum opportunity for IVGID residents, property owners, and beach users to participate. First, listed property owners where each sent a mailed survey with return envelope, secondly an identical set of survey questions was provided via online access for Incline Village residents and interested citizens, finally, staff at IVGID administered an on-site, real time intercept survey to users at the three beaches during the 2014 season. Each sampling approach provided a distinct look at IVGID beach users and residents, with mailed respondents, online, and on-site beach users each showing slightly varied characteristics and preferences.

Research Limitations

All survey or polling methodologies have some limitation. For the self-administered approach, used in this research project, we relied on questionnaire design and question wording to elicit an accurate response. However, each answer is a respondent's interpretation to a question's meaning. Fortunately, this particular research project relied on a very simple, relatively straightforward questionnaire that was intentionally worded with clear and direct language. Upon our review and scan of the processed data we found no evident misinterpretation of the questionnaire on the part of respondents that would invalidate any questions used on the instrument.

However, we did apply three different fielding methods – a mailed questionnaire, a similar online accessible questionnaire, and an onsite intercept questionnaire administered to current beach users at the three beach sites. Combining these three methods with the SM data analysis features and inherent limitations did complicate analysis tasks since that platform does not allow for combining similar data sets nor is it amenable to easy export into powerful statistical software packages like SPSS. Fortunately the data was adaptable to the EXCEL format which provides useful tools for simple statistical analysis that directly applicable to this research project.

Finally, the *IVGID 2014 Beach Survey* represents a profile of recreation use at these sites during the 2014 season and by some respondents' (mailed and online sample) recall of experiences at these beaches. Accordingly this does not directly indicate that the user profile and recreation patterns will be identical over the long term. Future recreation patterns may vary per any changes in visitor awareness, changes in the profile of IVGID property owners and beach users, and changes in the array of activities and services available at the beaches. Nevertheless this survey does provide a robust baseline for current planning and management activities, as well as for future research and planning study at the IVGID beach facilities.

2. Respondent Profile

Demographic Profile

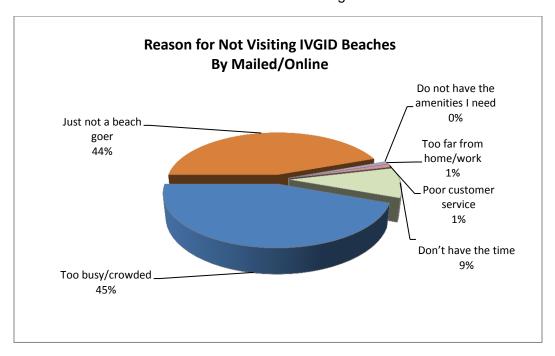

FIGURE 2-7: Reason for Not Visiting IVGID Beaches

TABLE 2-10: Other Reasons for Not Visiting IVGID Beaches

MAILED

My property has a beach.

Have a boat

jet skis + boats' exhaust have ruined Incline Beach - 25 yrs ago we were so fed up we bought a pass to park at Sand Harbor for last 25 yrs. We have forgotten about the Incline beaches, would use Burnt Cedar pool but our condo pool May-Sept. Before the jet skis we went to the Incline beaches almost every day.

Normally only there in winter.

HAVE ACCESS TO OUR OWN BEACH

JUST TOO CROWDED

not dog friendly

No beach access

NOT DOG FRIENDLY

I went to Incline Beach almost daily for over 20 years. It stopped being tranquil and quiet. It's a very unpleasant place now. Kayaks, paddle board. too many people

no parking

Do not allow dogs on beach area

I do not live at I.V.

have our own beach

condo has private beach

Have not been here long enough

We have dogs, so we go other places

Have a good beach at Crystal Shores West, where our unit is located

No dogs allowed - we don't want to leave our baby (dog!) at home while we go to the beach arrogance of entry, used to live in crystal bay and have been treated like an outcast for years

we have our own beach

cannot bring our dogs

I have a beach at my condo

once or twice a year with visitors

noisy, rowdy people

golfer

have a private beach.

home beach and marina at my condo

too crowded limited parking

Not in Incline during the summer

no dogs allowed

rented out full time

Have private beach.

Too many non-homeowners allowed access!

only use the pool

would like to make the time

Dogs not allowed

I own a yearly rental but do not live in Incline Village at this time.

Prefer the public access just down the lake towards sand harbor off the highway.

Cannot go in the sun anymore.

Go to sand harbor--3 hrs. at beach

Use Sand Harbor.

Too expensive for family

We have a lake front home with a pier & buoy.

Don't live there

have a private beach

we have our own beach -grandkids go to BC to use pool

Just haven't had the chance to go yet. but will

poor customer service

93 years old and incapacitated

Live out of town

I work too much

just not a beach goer

just not a beach goer

LIVE ON THE WATER WITH POOL

We have a dog.

HUSBAND DISABLED

TOO EXPENSIVE FOR A LARGE FAMILY

I have my own beach (Lake front)

I LIVE ON THE LAKE

MY FATHER-AN INCLINE RESIDENT SINCE 1970 IS 87 YEARS OLD AND DOES NOT GO ANYWHERE I AM HIS CARETAKER AND THE BEACH DOES NOT FIT INTO MY SCHEDULE PROPERTY IS A RENTAL

Only went when grandkids were small.

ONLINE

Beach access at condo

lakefront property owner not allowed access to beaches

Visit Tahoe area infrequently

FIGURE 3-8: Access Policy Preferences by Preferred Beach

Suggested Changes, Added Activities and Facilities, and Most Important Thing

Respondents were provided with multiple opportunities to make additional written comments about changes they would like to see at IVGID beaches, new activities or facilities that could enhance their beach experience, and the single most important thing IVGID can do to improve. Respondent comments, regardless of topic, centered on the following management areas:

- Reduced crowding at beaches
- Additional parking
- Beach cleanliness
- Allowing dogs
- Adding music entertainment
- Limiting access

4. Planning and Management Implications

- 1) IVGID Beach Users. The research included a mailed and online sample of those who either own property in the IVGID service area or are interested citizens, with the intercept sample including on-site beach users surveyed during the summer of 2014. Each of these samples may represent a slightly different audience. While mailed and online respondents indicated that they do use IVGID beaches often, intercept respondents were more frequent visitors. They also tended to be from younger age groups and accordingly lower income households. While responses from the intercept sample were generally not dramatically different from the other groups, managers reviewing these findings should note that on some issues such as access policy there were differing perspectives
- 2) Each Beach has a Featured Role. While the predominant reason for visiting all studied IVGID beaches is for passive recreation such as relaxing and scenery, each does have a specific purpose as viewed by those surveyed. Incline Beach is viewed as a scenic relaxing location and a place to swim in the lake perhaps a less active recreation destination and slightly more appeal to those with children. In comparison Burnt Cedar is noted for the pool and lawn areas and thus attractive as a family group activity site as indicated by the data. Finally, Ski Beach is very clearly a boating access beach compare to its companion facilities, may attract a younger male user and thus may be a distinct recreation management site. This indicates that each beach has a specific audience that may be especially engaged when planning and managing for each beach's unique characteristics.
- 3) Crowding and Parking. These are consistently critical issues for destinations in the Lake Tahoe Basin during the summer months and the IVGID beaches are no exception. Throughout the survey and noted with emphasis in written comments, crowding and associated parking issues remain a perceived issue.
- 4) Access. While only a minority of those surveyed want picture pass access only, when combined with the punch card responses the bulk of respondents prefer to not allow cash entry visitors. Nevertheless, those in favor of cash entry do comprise a large minority from one-quarter to one-third of respondents.
- 5) Additional or Improved Amenities and Services. Restrooms are typically the single most requested recreation site improvement, and from the perspective of those surveyed, IVGID beaches are no exception. Specifically how restroom facilities were to be improved was noted only rarely in comments, so this issue deserves further investigation. Interestingly, respondents were also in agreement about other additions specifically improved snack bar/café/restaurant facilities. Finally, music events were predominantly mentioned as an addition at the beaches. There was a further array of other new amenity ideas that provide addition options for enhancing the beach experience.
- 6) Overall Satisfaction. Overall IVGID beaches receive very robust positive satisfaction ratings by all respondent groups as well as ratings by preferred beach indicating a management approach that addresses the needs of IVGID recreation users.
